SURROZEN

Targeted Regeneration

Corporate Presentation

August 12, 2024

Legal Disclaimers

This presentation contains certain forward-looking statements within the meaning of the federal securities laws. Forward-looking statements generally are accompanied by words such as “will,” “plan,” “intend,” “potential,” “expect,” “could,” or the negative of these words and similar expressions that predict or indicate future events or trends or that are not statements of historical matters. These forward-looking statements include, but are not limited to, statements regarding Surrozen’s discovery, research and development activities, in particular its development plans for its product candidates SZN-043 and SZN-413 (including anticipated clinical development plans and timelines, the availability of data, the potential for such product candidates to be used to treat human disease, as well as the potential benefits of such product candidates) and the Company’s partnership with Boehringer Ingelheim, including the potential for future success-based development, regulatory, and commercial milestone payments, in addition to mid-single digit to low-double digit royalties on sales. These statements are based on various assumptions, whether or not identified in this presentation, and on the current expectations of the management of Surrozen and are not predictions of actual performance. These forward-looking statements are provided for illustrative purposes only and are not intended to serve as, and must not be relied on as a guarantee, an assurance, a prediction, or a definitive statement of fact or probability. Actual events and circumstances are difficult or impossible to predict and will differ from assumptions. Many actual events and circumstances are beyond the control of Surrozen. These forward-looking statements are subject to a number of risks and uncertainties, including the initiation, cost, timing, progress and results of research and development activities, preclinical and clinical trials with respect to SZN-043, SZN-413, and potential future drug candidates; Surrozen’s ability to fund its preclinical and clinical trials and development efforts, whether with existing funds or through additional fundraising; Surrozen’s ability to identify, develop and commercialize drug candidates; Surrozen’s ability to successfully complete preclinical and clinical studies for SZN-043, SZN-413, or other future product candidates; the effects that arise from volatility in global economic, political, regulatory and market conditions; and all other factors discussed in Surrozen’s Annual Report on Form 10-K for the year ended December 31, 2023 and Surrozen’s Quarterly Report on Form 10-Q for the quarter ended June 30, 2024 under the heading “Risk Factors,” and other documents Surrozen has filed, or will file, with the Securities and Exchange Commission. If any of these risks materialize or our assumptions prove incorrect, actual results could differ materially from the results implied by these forward-looking statements. There may be additional risks that Surrozen presently does not know, or that Surrozen currently believes are immaterial, that could also cause actual results to differ from those contained in the forward-looking statements. In addition, forward-looking statements reflect Surrozen’s expectations, plans, or forecasts of future events and views as of the date of this presentation. Surrozen anticipates that subsequent events and developments will cause its assessments to change. However, while Surrozen may elect to update these forward-looking statements at some point in the future, Surrozen specifically disclaims any obligation to do so, except as required by law. These forward-looking statements should not be relied upon as representing Surrozen’s assessments of any date after the date of this presentation. Accordingly, undue reliance should not be placed upon the forward-looking statements.

Investment Highlights

- **Innovator** in modulating the Wnt pathway for tissue regeneration; attractive, novel treatment strategy for large markets with high unmet need
- **First-in-class SZN-043** antibody in Phase 1 – Phase 1b trial initiated Q2 2024
- **Phase 1b efficacy data** anticipated in 1H 2025
- Potential for **Breakthrough Therapy Designation** for SZN-043 in Severe Alcohol-Associated Hepatitis
- Proprietary antibody platforms: **SWAPS** (Surrozen Wnt signal activating proteins) and **SWEETS** (Surrozen Wnt signal enhancer engineered for tissue specificity)
- **Robust patent estate** with multiple issued patents and 25+ applications
- **Validated** by collaboration with **Boehringer Ingelheim** in ophthalmology with potential for **non-dilutive cash** in 2024

SURROZEN

Prominent Role in Wnt Biology Breakthroughs

Our Discoveries Enabled the Pursuit of Selectively Harnessing the Wnt Pathway for Regeneration

DISCOVERIES

Discoveries form the foundation of our proprietary technologies

- First synthetic, soluble Wnt mimetics
- Multivalent binding required to confer potency and selectivity
- Multivalent bi-specific antibody formats for optimal activity
- R-Spondin mimetic technology and potential role in regeneration
- Fzd4 agonism therapeutic potential in retinopathies

SURROZEN

Liver Program

SZN-043

Hepatocyte-Targeted R-spondin Mimetic (SWEETS) for Severe Alcohol-Associated Hepatitis

SURROZEN

SZN-043 Program Summary

Antibody Targeted to Liver that Mimics Endogenous R-Spondin to Mediate Liver Regeneration

- Phase 1b study initiated in Q2 2024 in severe alcohol-associated hepatitis (SAH)
- Potential for Breakthrough Therapy Designation; Phase 2/3 adaptive trial design precedent set for SAH
- Phase 1 single and multiple dose safety studies in healthy volunteers demonstrated acceptable safety and tolerability up to 1.5mg/kg
- Demonstrated activation of Wnt signaling, target engagement and effects on liver function in patients with a history of liver cirrhosis
- Multiple pre-clinical models of acute and severe liver injury demonstrate that SZN-043 rapidly stimulates mature hepatocyte proliferation and improved liver function
- Proliferative and functional effects of SZN-043 directly address pathology of alcohol-associated hepatitis - rapid hepatocyte loss leading to high mortality rate

SURROZEN

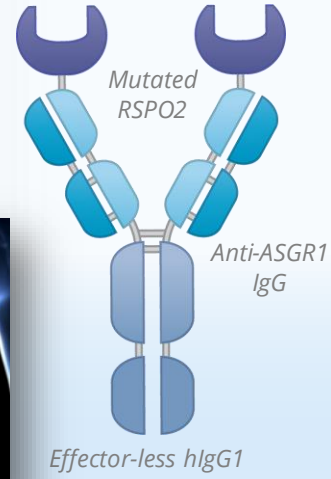
SZN-043 Potential to Transform Patient Outcomes in SAH

Well Validated Endpoints; Potential Rapid Pathway to Approval; Unmet Medical Need

Why Severe Alcohol-Associated Hepatitis?

- 130,000 patients in the U.S. hospitalized with SAH[1]
- 90-day mortality 30% in high MELD score patients[2]
- No approved drugs for SAH – steroid used in minority but no effect on mortality at 90 days[1]
- Potential for rapid development and regulatory path[1]
- Intermediate endpoints like Lille score strongly correlated with survival[3]

Our Solution



MOA: SZN-043 designed to addresses underlying pathophysiology

- Hepatocyte proliferation & Wnt signaling correlated with improved survival
- Upregulation of Wnt signaling implicated in improved liver function

Selectivity achieved through inclusion of ASGR1 binder

Sources: 1. Analysis by Clearview Health Partners for Surrozen; HCUP National Inpatient Sample (NIS); Physician Market Research

SURROZEN

SZN-043 Phase 1a Clinical Trial Summary

Moving Forward with 0.5mg/kg to 1.5mg/kg in Phase Ib

Safety & PK

- Adverse events assessed to be drug related were mild to moderate, all resolving during the study
- In healthy volunteers, a few asymptomatic and transient transaminase elevations (ranging from mild to moderate) were observed which resolved without intervention
- No drug related adverse events reported in patients with cirrhosis at any dose
- No Suspected Unexpected Severe Adverse Reactions (SUSARs) have been observed
- PK consistent with expectations and supportive of the planned doses, schedule and route of administration for SAH

Effects on liver function, PD Activity & Target Engagement in Cirrhotics

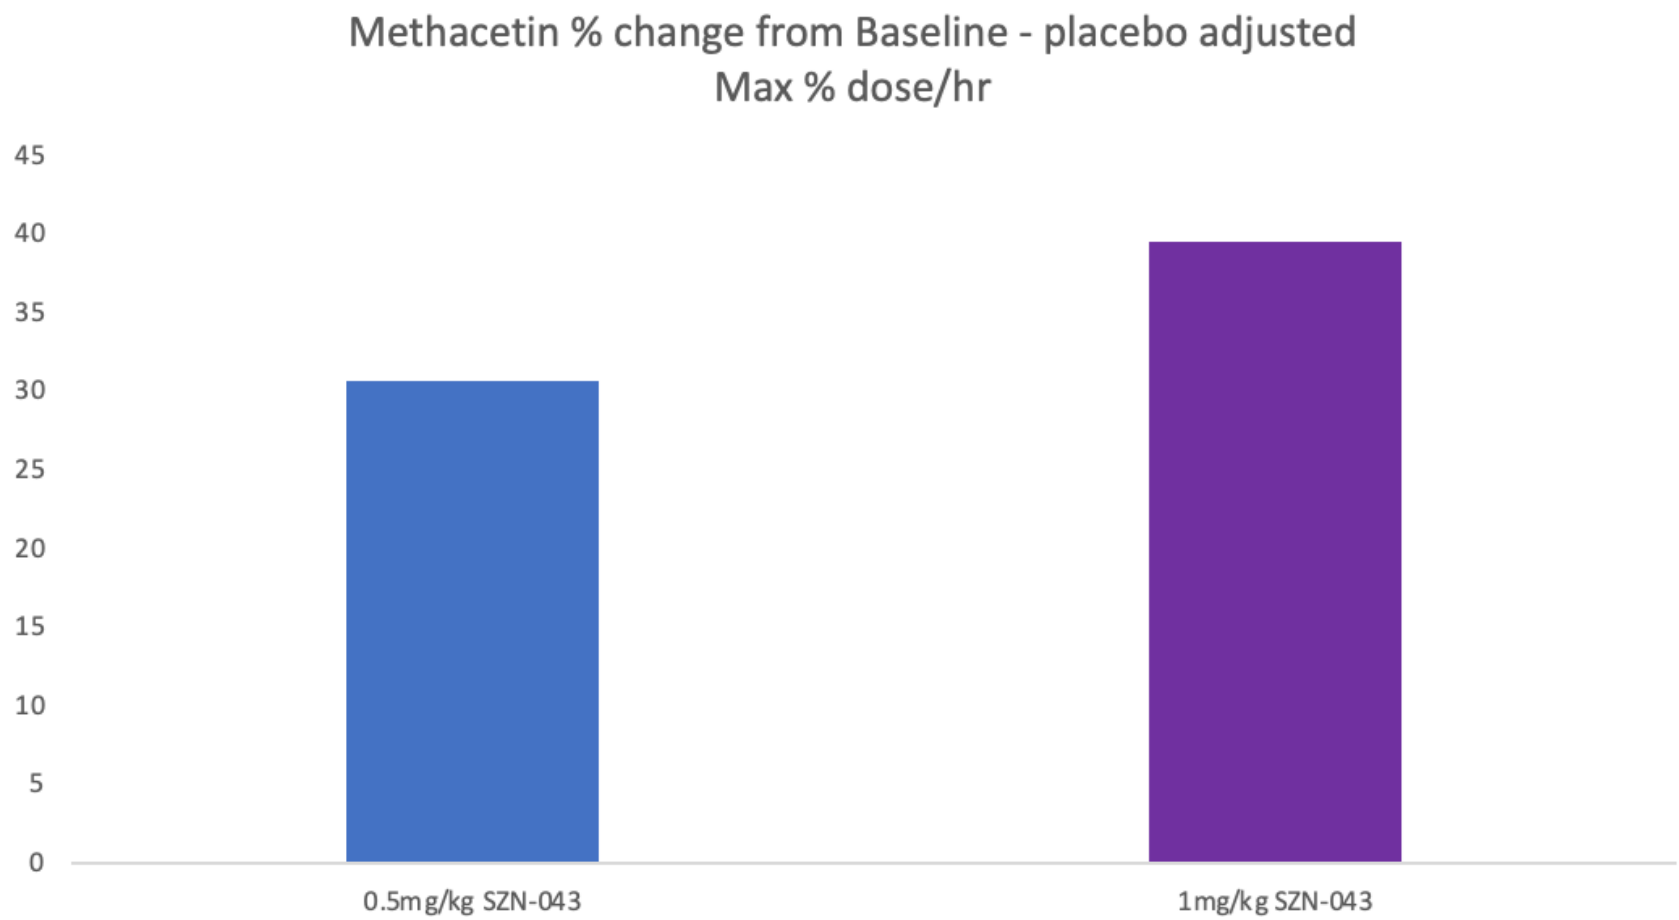
- Demonstrated dose dependent pharmacodynamic (PD) activity through activation of Wnt signaling as assessed by methacetin breath test*
- Target engagement was confirmed via transient increases in alkaline phosphatase (ALP)**
- Effects on liver function as measured by HepQuant***

*Methacetin breath test measures activation of the Wnt pathway via the metabolism of a Wnt target gene (CYP1A2) substrate
**Increases in ALP are indicative of SZN-043 binding to its targeting receptor ASGR1 and reduction in its capacity to clear ALP, consistent with observations in other ASGR1 binding agents
***HepQuant is a test that measures cholate clearance, a liver specific function that quantifies liver function

SURROZEN

PD: Breath Test Results Indicate Activation Of Wnt Pathway In Cirrhotics

Test Measures Metabolism of Methacetin by Wnt Pathway Gene (CYP2A1)

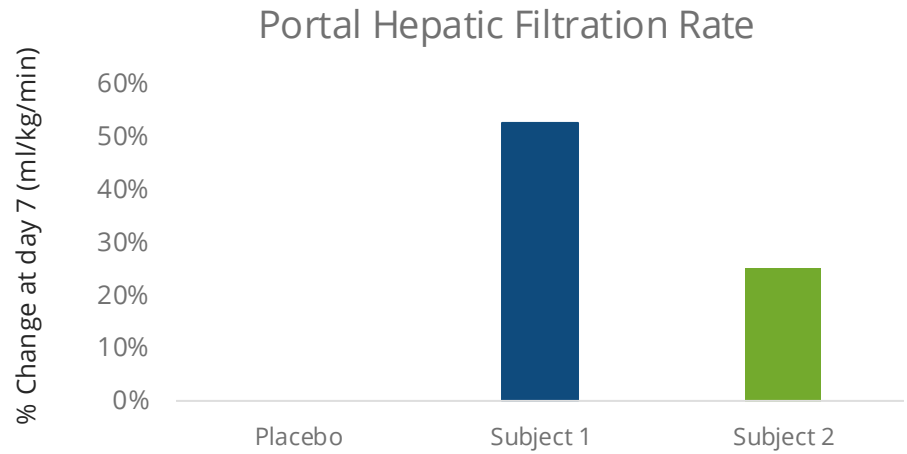


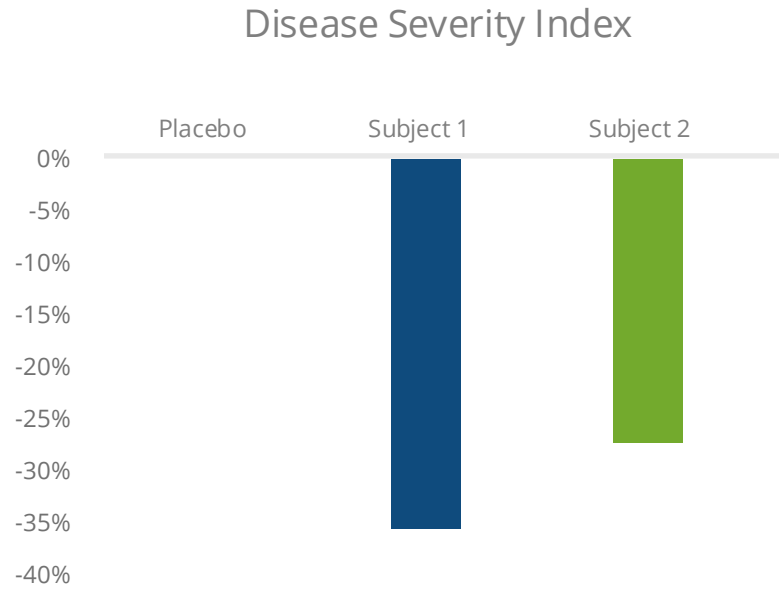
SURROZEN

SZN-043 Demonstrated Effects on Liver Function in Cirrhotics

Improved Portal Hepatic Filtration Rate and Disease Severity Index

- HepQuant test measures cholate clearance, a liver specific function that quantifies liver function
- Demonstrated improved portal hepatic filtration rate and disease severity index
- Returned portal hepatic filtration rate and disease severity index to normal





SURROZEN

SZN-043 In Vivo Effects

Liver Specific Proliferation, Functional Improvement, Fibrosis Regression

Compelling Preclinical Data

- >25 preclinical studies conducted
- Selectively activates Wnt Signaling in Hepatocytes
- Selectively Induces hepatocyte proliferation
- Rapidly improves liver function
- Reduces markers of liver injury & inflammation
- No adverse findings in GLP tox studies

Improvement in Liver Function

SURROZEN

SZN-413 Program

SURROZEN

SZN-413 Program Summary

Antibody Targeted to Fzd4 which is Known to Mediate Proper Function of Retinal Vascular Endothelial Cells

- Novel mechanism for treatment of retinopathies that can directly reduce leakage and potentially reduce VEGF production
- Multiple preclinical models of retinal injury demonstrated that SZN-413 rapidly reduces vascular leakage and avascular areas
- SZN-413 was licensed to Boehringer-Ingelheim (BI) under an October 2022 collaboration agreement
  - Surrozen received $12.5M upfront; potential milestones of up to $586.5M; mid-single to low double-digit royalties
  - Potential $10M milestone payment in 2024

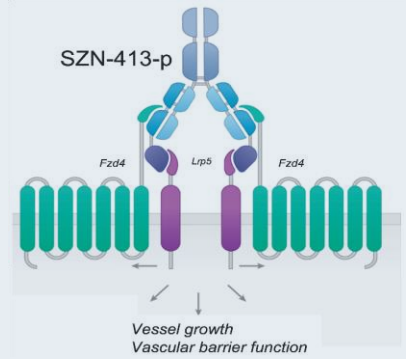
SURROZEN

SZN-413: Potential for Full Reversal of Patient's Retinopathy

Retinal Vascular Program

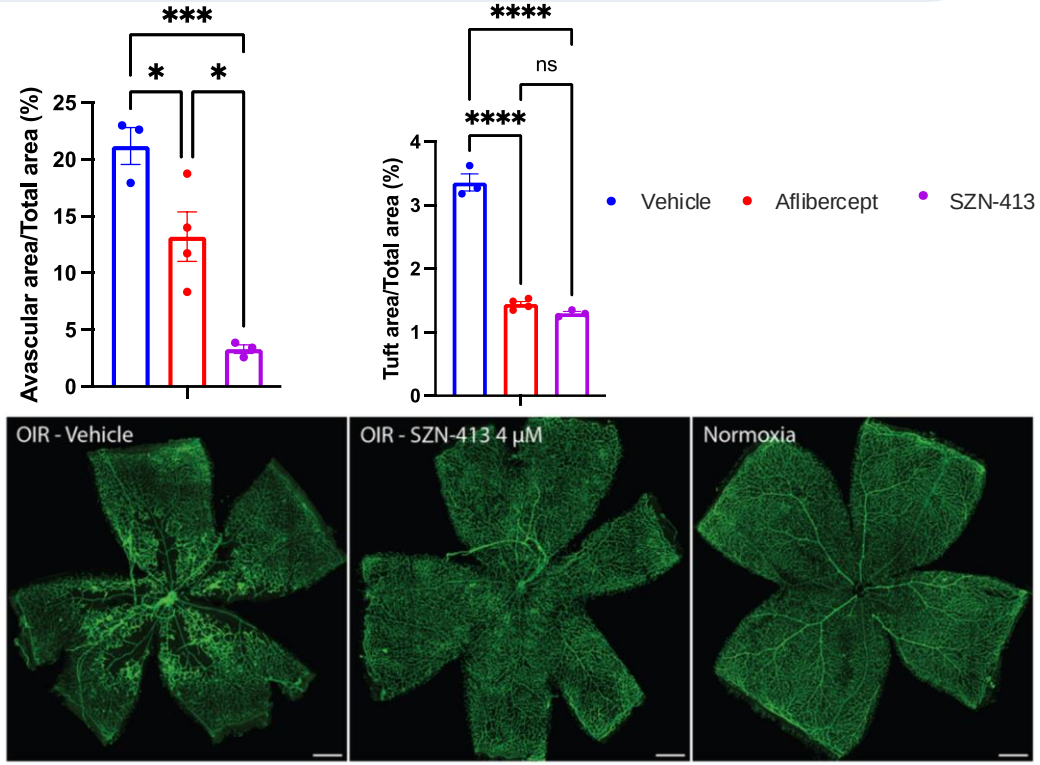
SZN-413 addresses retinal non-perfusion and vascular leakage simultaneously

Fzd4/Norrin signaling plays critical role in maintenance of retinal vasculature integrity



SZN-413 (Fzd4/LRP5 SWAP Wnt Mimetic):

- Stimulated Wnt signaling Increased tight junction protein expression in endothelial cells
- Restored norrin function in Ndp KO mice
- Reduced avascular area & pathologic NV tuft formation in OIR model
- Reduced vascular leakage in VEGF-induced retinal model



Nguyen et al., 2022

SURROZEN

Cornea and Retinal Programs

SURROZEN

Surrozen Wnt Agonist Significantly Reduces Corneal Thickness in Model of Corneal Dystrophy

Corneal Endothelium: Fuchs' Dystrophy

Rationale

- Fuchs' leads to vision loss and discomfort; 4% of adults >40 have signs of FECD in U.S.[1]
- Need for novel therapies to slow progression or improve surgical outcomes
- Wnt receptors expressed in normal and Fuchs' diseased tissues
- Strategy: Wnt activation to regenerate corneal endothelial cells, reducing swelling & improving vision

Preclinical Data: Surrozen Wnt agonists

- Enhanced proliferation of human corneal cells
- Reduced corneal thickness and opacity

Preclinical Efficacy Studies with Surrozen Wnt Agonist

Appendix

SURROZEN

Glossary

- ADA – Anti-drug antibodies
- AE – Adverse events (SAE – serious AE)
- AH – Alcohol-associated hepatitis
- ALP – Alkaline Phosphatase
- ALT – Alanine Aminotransferase
- AMD – Age-related macular degeneration
- ASGR1 – Asiaglycoprotein receptor 1
- AST – Aspartate aminotransferase
- AT1/AT2 – Alveolar type epithelial cell
- AUC – area under the curve
- BW - biweekly
- CCL4 - carbon tetrachloride
- DME – Diabetic macular edema
- Dx – Diagnosis
- ETOH – Ethyl alcohol
- FECD – Fuchs' endothelial corneal dystrophy
- Fzd – Frizzled
- GFP – Green fluorescence protein
- GLP – glucagon-like peptide
- HNF alpha - Hepatocyte nuclear factor 4 alpha
- HV – Healthy volunteer
- IgG – Immunoglobulin G
- IV – Intravenous
- KO – Knock-out model
- Lille – Prognostic model for AH
- Lrp – Lipoprotein receptor-related protein
- MAD – Mulgtiple ascending dose
- MELD – Model for end-stage liver disease score
- Mg – Milligrams
- MOA – Mechanism of action
- Ndp – Norrie disease gene
- NV – Neovascularization
- OCA – obeticholic acid
- PD – Pharmacodynamics
- PK – Pharmacokinetic
- POC – Proof-of-concept
- QD - daily
- MAD – Multiple ascending dose
- RPE – Retinal pigment enpithelial tears
- SAD – Single ascending dose
- SAH – Severe alcohol-associated hepatitis
- SOC – Standard of care
- SUSARs – Suspected unexpected severe adverse reactions
- SWAP – Surrozen Wnt signal activating proteins
- SWEETS – Surrozen Wnt enhancer engineered for tissue specificity
- TA– Transaminase
- TAA – Thioacetamide
- VEGF – vascular endothelial growth factor
